Workshop 2

Introduction to React Native - Workshop 2

The goal of this second workshop is to be able to use the Github API into you application.

Requirements:

For this second workshop, you are required to consume the Github API in your app. You have to request users and repositories with Github's search API (https://docs.github.com/en/free-pro-team@latest/rest/reference/search).

Your app has to look for empty answers and API errors. Display the found results and show a loader while the request isn't complete.

Informations:

For any questions, email me at guillaume1.munsch@epitech.eu :) I'll be happy to help !
