# Workshop 1

Introduction to React Native - Workshop 1

The goal of this first workshop is to be able to launch your app, design your screen and start to use a router to navigate through screens.

## Requirements:

You have to create your React Native Application (with Expo or React Native CLI) and create a design for your Github Search Interface. Design the search view (with an input and a list of results), a user's view, a repository view and a favorites view.

It is highly encouraged to use a router.

Router examples:

- https://reactnavigation.org/
- https://github.com/aksonov/react-native-router-flux

## Informations:

For any questions, email me at guillaume1.munsch@epitech.eu :) I'll be happy to help !
